① Business Analytics

- refers to statistical methods and tools used to analyze business performance and support better decision-making
- it uses quantitative analysis to uncover patterns and relationships that enable decision-making

e.g: enhancing Brightlearn app customer support to ensure quality user experience for Brightlearn students.

source: International Business ~~Management~~ machines (https: www.ibm.com)

② Data Analytics

- the process of collecting, examining, transforming and organizing data to find patterns, make predictions and make data-informed decisions
- it focuses on using a range of tools and processes to handle and analyze data.
- convert raw data into actionable insights

e.g: Data analyst using SQL or Python to clean and analyze Bright retail sales data and dashboard to visualize the results.

source: Coursera (www.coursera.org)

③ Business Intelligence (BI)

- includes a set of technological processes and tools used to collect, manage, and analyze data to gain insights that influence business strategies and operations. (e.g: Google Looker Studio dashboards to visualize Bright Retail performance)
- source: International Business ~~Management~~ machines (www.ibm.com)

④ Data-driven decision making

- an approach of using data and analysis instead of intuition to make informed decisions
- facts, metrics and data analysis guide business decision-making, not guesswork

e.g: Bright Retail uses customer data to manage its inventory and to influence pricing strategies

source: International Business ~~Management~~ machines (www.ibm.com)

⑤ Big data

- refers to incredibly huge amount of both structured and unstructured data that is generated by humans and machines
- it has extremely large and too complex datasets that traditional data management systems cannot handle.

e.g: entertainment and streaming platforms analyze billions of streaming data points in order to recommend content and filter according to user preferences

source: Oracle (www.oracle.com)

⑥ Descriptive analytics

- focuses on using current and past data to identify patterns
- historical data helps to understand what happened in the business

e.g: Bright Retail weekly turnover reports.

source: Harvard Business School (https://online.hbs.edu)

⑦ Diagnostic Analytics

- a data analysis method that explains the reasons why events happened.
- add context and details to the data, ~~explain~~ which helps businesses to make informed choices by understanding influencing factors.

e.g: Investigate why Bright coffee weekly turnover dropped in Lower Manhattan.

source: Amplitude (https://amplitude.com)

⑧ Predictive Analytics

- uses historical data to forecast potential future trends that can help influence business decision-making
- uses regression-analysis to determine relationship between two or more variables and help predict outcome should variables change.

e.g: Banks use credit score and customer behaviour to estimate the probability of defaults on loans

source: Harvard Business School (https://online.hbs.edu)

⑨ Prescriptive Analytics

→ a practice of analyzing data to uncover patterns that can be used to make future prediction.

→ it's also a process of using data to establish optimal course of action

e.g: Bright Retail sales demand forecasting

source: International Business Machines (www.ibm.com)

⑩ Data literacy

→ a person's ability to read, comprehend and use data effectively

→ a person's ability to utilize data in more than one way

e.g: Data analyst presenting Bright Coffee dashboard to the CEO

source: Harvard Business School (https://online.hbs.edu)

⑪ Structured data

→ refers to organized data. Data with a known format

e.g: Point-of-sale Data (transaction records, time, item bought, amount)

source: Brightlearn (brightlearn.co.za)

⑫ Unstructured data

→ refers to data without a format. Analysts don't deal with unstructured data as there is no specific format. They deal with structured data

e.g: videos, social media

source: Brightlearn (brightlearn.co.za)

⑬ Data warehouse

→ a central datastore where large amounts of data is stored.

→ there are multiple databases inside data warehouse

e.g: Bright Retail storing data from its sales for reporting

(catalogue: workspace.schema.tablename)

source: Brightlearn (brightlearn.co.za)

(14) Data mining

- a process of discovering hidden patterns, trends, and meaningful insights from large datasets
- it uses advanced computing techniques to filter through large volumes of raw data in order to extract valuable insights

e.g: identify Bright Coffee Shop customer spending / consumption pat
source: databricks.com

(15) Data visualization

- refers to graphical representation of information that makes insights easier to understand

e.g: Microsoft Excel pivot charts and tables
source: tableau (www.tableau.com)

(16) Dashboard

- it is a visual display of data in one place. It displays metrics, KPIs and metrics

e.g: Google looker studio
source: tableau (www.tableau.com)

(17) Metric

- refers to quantitative values used to track performance overtime

e.g: Bright TV daily viewership (measured by number of viewing sessions)
source: Investopedia (www.investopedia.com)

(18) KPI (Key Performance Indicator)

- it is a metric that measure progress towards business goals
- it is also used for business decision-making as it is directly linked to primary business goals

e.g: Bright TV subscription growth rate (tracks increase in total subscribers)
source: Investopedia (www.investopedia.com)

(19) Benchmark

→ is the level of quality which can be used as a standard to compare performance

e.g: Bright retail sales total revenue and average revenue per product category

source: investopedia (www.investopedia.com)

(20) Segmentation

→ involves a division of customer groups into smaller targeted groups based on shared characteristics

→ it helps the business tailor needs, increase engagement, and improve sales.

e.g: group by demographics (location, age, gender)

source: Investopedia (www.investopedia.com)

(21) Conversion Rate

→ a percentage usually used to evaluate performance

→ can also be described as a percentage of users who complete ~~enga~~ desired actions.

e.g: clicking an ad

source: Adjust (www.adjust.com)

(22) Customer Acquisition Cost (CAC)

→ the cost which the business incur in order to acquire new customer

e.g: advertising fees

source: Amplitude (https://amplitude.com)

(23) Customer Lifetime Value

→ total value of profit expected from a customer by the business overtime.

e.g: subscription fees customer pay monthly to access the products

source: International Business ~~Management~~ machines (www.ibm.com)

24) Churn rate

→ refers to the percentage of customers that discontinue using services provided by the business

e.g: customers unsubscribing

source: Investopedia (www.investopedia.com)

25) Customer Retention Rate

→ percentage of customers a business retained over a specific time. It is calculated by dividing the number of customers a business had at the beginning by the current number of customers

e.g: ~~Returning~~ number of returning customers in a year

source: International Business Machines (www.ibm.com)

26) Net Promoter score

→ it is a customer experience metric that helps measure customer loyalty based on likelihood to recommend or not

→ usually ranges from -100 to +100

e.g: rating scale (0 as unlikely then 5 as very likely)

source: International Business Machines (www.ibm.com)

27) Average Order Value

→ measures the average amount the business spent per transaction. It is calculated by dividing total revenue by number of orders

e.g: daily revenue ÷ no. of coffees sold

source: Amplitude (https://amplitude.com)

28) Sales funnel

→ different stages a customer goes through before buying the products

e.g: awareness (through ads), interest, buying (final stage)

source: Salesforce (www.salesforce.com)

(29) Marketing Campaign

→ a series of planned strategic actions coordinated to promote business products. It helps the organization to meet its strategic goals overtime.

e.g: social media campaign to launch and review products.
source: Salesforce (www.salesforce.com)

(30) Post-campaign Analysis

→ a review of the campaign's performance and effects after launching. Evaluate if the campaign reached intended goals

e.g: ratings and feedback

source: Camphouse (https://camphouse.io > Articles)

(31) Incremental revenue

→ it is the extra income generated from undertaking a specific business activity. It is measured by comparing sales data before a marketing campain and after.

e.g: bonus from ad campaign. or promotion
source: Ringy CRM (www.ringy.com)

(32) Return on investment (ROI)

→ a financial ratio used to measure profitability of an investment relative to its cost.

e.g: ratio between net profit to its investment

source: Harvard Business School (https://online.hbs.edu)

(33) Return on Ad Spend (ROAS)

→ a marketing metric that measures how much was generated for every rand invested in marketing campaigns (advertising).

→ it's calcuted by dividing total sales by advertising spend invested.

e.g: renenue ÷ cost, R3 earned for every R1 spent.

source: Amplitude (www.amplitude.com)

(34) Click - Through Rate (CTR)

→ percentage of viewers who engages in online advertisement

e.g: clicks ÷ impressions X 100

source: Investopedia (www.investopedia.com)

(35) Bounce Rate

→ a percentage of users who do not engage with your website

→ users leave the content without interacting

e.g: do not react to posts and leave the website immediately

(36) A/B Testing

→ a process of comparing two versions on the same product to test which one performs better.

→ this process is used to determine which product is best for users

e.g: using different ads or campaign for Coca-Cola

source: Fullstory (www.fullstory.com)

(37) Lead Generation

→ process of building interest in a product and turning it into a sale in order to attract customers

→ business identify potential customers and convince them into buying the products.

e.g: hosting webinars

source: coursera (www.coursera.org)

(38) Marketing Attribution

→ analytical science of determining which marketing channels are contributing to sales. Credit is assigned to marketing routes for conversations

e.g: compare different social media platforms to see which one influenced increase in sales

source: Marketing Evolution (www.marketingevolution.com)
